## SIP TRUNKING

### IP Trunking that grows with your business

Solex SIP Trunking is a trunk replacement service that allows you to augment your existing phone system and leverage the power of unique, cloud-based features. Solex SIP Trunking may be deployed over your existing IP and broadband network or bundled with Solex Broadband and MPLS services. Uniquely, Solex SIP Trunking is offered either in static or dynamic configuration to meet your specific PBX needs and match your usage patterns. With Solex SIP Trunking, get the most of your phone system while reducing your costs.

### Reduced Costs

Since 2007 and with more than 40 PBX types certified, Solex SIP Trunking has enabled thousands of businesses of all sizes to save money, by eliminating PRI trunks, analog lines and reducing hardware costs. With pricing plans optimized for your application, we'll help you maximize your phone savings.

### Advanced Routing

Solex SIP Trunking maximizes routing flexibility and reliability. Distribute your calls across multiple sites as if they were one, or route inbound calls based on business rules customized for specific DIDs or DID group. Optionally, you may reconfigure these rules as your business dictates via our centralized online portal, fully leveraging cloud-based routing and feature management.

### Business Continuity

With Solex SIP Trunking, your business is always reachable. Business continuity is built into our service at the network level to address overflow calls, IP issues or PBX failures. From day one, harden your telephony solution by selecting from our various business continuity and failover options.

### Services and Equipment

Solex SIP Trunking flexible pricing is based on voice paths, local/long distance plans, and capacity allocation. Call paths may either be configured as static (fixed calling capacity for a given location) or dynamic (when calling capacity is required during peak times or across multiple locations).

### Solex SIP Trunking Portal

The Solex SIP Trunking Portal is an optional feature that allows administrative users to change how calls are routed as frequently as needed and at a moment's notice, for business continuity or capacity planning purposes. Customers can create, manage and maintain DID Groups, Trunk Groups, Call Routes and Trunk Plans. This portal offers real-time routing that combines intelligent and advanced planning features with enhanced and easily implemented functionality.

SERVICE PACKAGES	EQUIPMENT	OPTIONS

### Our Approach to Customer Excellence

At Solex, we understand your IT environment and communications needs are unique and constantly evolving. Our staff knows what it takes to implement an enterprise-wide telephony solution without any interruption of service. From IP connectivity and network design, to service and usage plan selection, equipment installation and training, we handle each customer engagement as an individual project, with a human touch most service providers can't match.

Cloud Solutions Delivered. Express.
